

# AGILE & SCRUM PROFESSIONAL DEVELOPMENT PROGRAM

## Who Is This Training For?

This two-day accredited training program is crafted for team members looking to boost their project management and everyday task execution skills utilizing best practice in SCRUM and Agile methodologies.

## What Will You Learn?

We'll delve into Scrum and Agile methodologies, vital tools for enhancing project collaboration, flexibility, and efficiency. In the Scrum section, we illuminate the structured approach this Agile framework brings to project management. You'll understand Scrum roles (Product Owner, Scrum Master, Development Team), artifacts (Product Backlog, Sprint Backlog, Increment) that boost project visibility, and ceremonies (Sprint Planning, Daily Scrum, Sprint Review, Sprint Retrospective) that promote collaboration and improvement. Agile's adaptive, iterative approach to project management takes center stage in the second part. Its key principles include iterative development, customer collaboration, and adaptive planning.

## Why Is This Training Relevant?

By acquainting our team with these innovative project methodologies, we aim to enhance efficiency and the overall customer experience. These skills are essential for navigating project complexities in the current fast-paced business climate and swiftly

adapting to changing requirements.

## What's the Larger Context?

This training fosters a culture of continuous learning and improvement. By understanding and implementing Scrum and Agile methodologies, we optimize our workflows and improve responsiveness to customer needs, thereby enriching the customer experience.

## Exit-Level Outcomes:

Upon completing this training, you'll be able to:

- Effectively apply Scrum and Agile methodologies in project management, improving efficiency and customer satisfaction.
- Utilize Scrum artifacts to enhance project transparency and accountability.
- Facilitate Scrum ceremonies to foster team collaboration and continuous improvement.
- Employ Agile's iterative development and adaptive planning principles to deliver value in shorter timeframes and promptly adjust to changing requirements.
- Incorporate regular customer interactions into project processes, ensuring better alignment with customer needs.
